Gregorio Giménez

## Personal Statement

*Researcher focused on human capital and economic growth, with strong communication and technical skills*

I received my Ph.D. in economics from the University of Zaragoza (Spain) in 2003 and have been teaching there since then. My teaching interests are primarily in the areas of economic growth, development and political economy.

My research is principally dedicated to analyzing the links between growth, innovation, human capital and institutions. For example, I have built different indicators of human capital and analyzed how this factor contributes to innovation and economic growth.

My research has also focused on the economics of education, studying how factors like social development, violence or educational inputs determine academic success.

I supervise research projects and Ph.D. theses in these areas, and my works have been published in leading international journals.

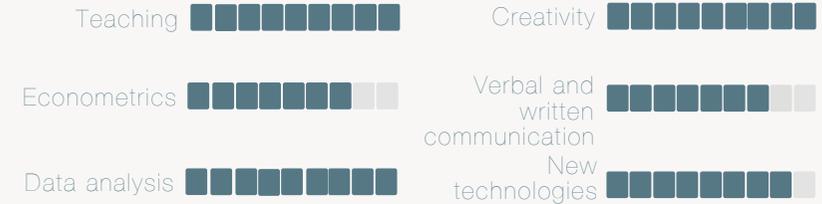

Finally, my long-lasting interest in Latin American economy has led me to be a visiting professor, researcher and consultant in several institutions in the region.
